### Reviewer's Comment for Publication.

The manuscript presents an important study on the effect of climate-smart agriculture on the food security status of cassava farming households in Kogi State, Nigeria. The topic is relevant and timely considering the growing concerns of climate change and agricultural sustainability in developing countries. The study is well-structured with clear objectives, appropriate methodology, and relevant statistical tools used for data analysis. The findings provide valuable insights into the adoption of climate-smart agricultural practices and their relationship with household food security. The discussion is informative and contributes meaningfully to existing literature on climate-smart agriculture, food security, and rural livelihoods. The manuscript is suitable for publication due to its academic relevance and practical implications for agricultural policy and food security interventions.
