Detailed Reviewer's Report

This qualitative case study examines the integration of artificial intelligence in religious education at MA Al-Amiriyyah, Indonesia, focusing on how AI can support learning without undermining traditional values. The topic is timely and relevant. However, a few minor issues require attention. First, the manuscript has repetitive sentences (e.g., the data collection paragraph appears twice on page 3). Second, Chart 1 is mentioned but not provided; the authors should either include the figure or remove the reference. Third, several references are incomplete (e.g., "Ahda & Hamida, n.d.", "Mas'ud Muhammadijah et al., n.d.") – please add publication years or mark as "in press". Fourth, some English phrasing needs polishing (e.g., "materi ajar berbasis teknologi" should be translated). Fifth, the conclusion would benefit from a brief acknowledgment that findings from a single school may not be generalisable. These revisions are straightforward and do not require new data collection. With these corrections, the paper will be acceptable.
