Detailed Reviewer's Report

The manuscript addresses an important and contemporary topic concerning data governance, data quality management, and trustworthy AI adoption in enterprise information systems. The paper is well structured, presents a clear conceptual framework, and provides relevant discussion of governance responsibilities, data quality dimensions, metadata, lineage, AI assurance, and implementation strategies within the Saudi Arabian context. The proposed framework and scorecards offer practical value for enterprise decision-making and organisational digital transformation. The manuscript is generally clear, coherent, and relevant to the field. Minor revisions are recommended to further strengthen the presentation and scholarly quality of the manuscript before publication.
