Reviewer's Comment for Publication.

The manuscript presents a relevant and well-organized review of climate-smart agriculture and its role in improving crop productivity and environmental resilience. It covers important areas including soil health, water management, crop diversification, agroforestry, integrated pest management, precision agriculture, and policy support. The manuscript is generally clear and informative. Minor revisions are recommended, particularly to strengthen the critical synthesis of the reviewed literature, improve consistency in references and citations, and add more recent scholarly sources where appropriate. Some sections may also be briefly streamlined to avoid repetition. Subject to these minor revisions, the manuscript may be considered for publication.
