Reviewer's Comment for Publication.

The manuscript addresses a relevant topic and provides a clear overview of the relationship between organic farming, soil biodiversity, soil health, and crop production. It covers important practices such as composting, crop rotation, cover cropping, biological pest management, and organic nutrient management. The manuscript is well organized and generally easy to understand. Minor revisions are recommended to strengthen the critical discussion of existing literature, improve the use and consistency of citations, and include some recent research findings. A few repetitive statements may also be streamlined. After these minor revisions, the manuscript may be considered for publication.
