Reviewer's Comment for Publication.

The manuscript addresses an important and timely issue concerning agricultural water conservation and sustainable crop production. It provides a clear overview of irrigation technologies, soil-moisture conservation, rainwater harvesting, deficit irrigation, digital technologies, and groundwater management. The manuscript is well structured and generally clear. Minor revisions are recommended to strengthen the critical synthesis of the literature, incorporate some recent research findings, and ensure consistency and completeness of references and citations. A few repetitive statements may also be streamlined. After these minor revisions, the manuscript may be considered for publication.
