Reviewer's Comment for Publication.

The manuscript presents a relevant conceptual framework integrating Artificial Intelligence, Blockchain, and Internet of Things technologies for trustworthy IoT security. The paper covers important areas including AI-based anomaly detection, classification, decentralized authentication, data integrity, smart contracts, and security logging. The proposed framework is clearly organized and addresses significant aspects of IoT security. The manuscript has academic relevance and provides a useful overview of the integration of AI and blockchain technologies in IoT environments. Overall, the manuscript is suitable for publication after minor revision.
