Reviewer's Comment for Publication.

The manuscript provides a comprehensive and well-structured review of enhanced recovery pathways following robot-assisted urological surgery, covering radical prostatectomy, radical cystectomy, and renal surgery. The topic is clinically relevant, and the discussion appropriately highlights procedure-specific recovery, pathway adherence, same-day discharge, patient selection, and future research needs. The manuscript is generally clear and informative. However, minor revisions are recommended to improve consistency in terminology, formatting of tables and headings, and presentation of some methodological and reference details. With these minor corrections, the manuscript will be suitable for publication.
