Detailed Reviewer's Report

The study is well conducted. It addresses the topic and presents the study in an understandable discourse. The manuscript has good flow and clarity too. The manuscript addresses a relevant and timely topic and makes a meaningful contribution to the existing literature.

It is first of all conceptual, in that all the propositions in P1 – P4 must be tested empirically before any causal or even correlational conclusions can be drawn. Propositions are clearly stated, and the study is grounded purely conceptual framework and nothing has been tested empirically.
