Significance		✓		

Reviewer Name: Dr S. K. Nath

### Detailed Reviewer's Report

#### Strengths of the Study

- The paper addresses a highly relevant issue of balancing chemical fertilizers with natural soil processes, contributing to sustainable agriculture discourse.
- It incorporates a broad review of government policies and initiatives for soil health management, providing valuable policy insights.
- The discussion emphasizes the importance of ecological balance, integrating biological and chemical perspectives effectively.
- The manuscript demonstrates a comprehensive understanding of soil chemistry and biological interactions, offering a nuanced perspective.
- The inclusion of multiple references suggests a thorough literature review which supports the context.

#### Weaknesses of the Study

- The manuscript appears to be largely a literature review without original experimental data or empirical analysis.
- The methodology is not explicitly described, including how sources were selected or synthesized.
- There is a lack of clear data presentation, figures, or tables to support the discussion points.
- The paper's language and organization need significant improvement for clarity and coherence.
- No ethical considerations or clearance statements are mentioned, though perhaps not necessary given the review nature.
- The structure of the manuscript as per standard academic conventions is weak, with minimal sectioning and unclear paragraph transitions.
- Some parts of the text are difficult to comprehend due to language issues and typographical errors.
- The references are listed but lack consistency in formatting; some are incomplete.

#### Reviewer Comments

- **Title and Abstract:** The title is not explicitly stated or clear, and there is no abstract. An informative and concise abstract is essential to summarize key research objectives and findings.
- **Introduction and Objectives:** The introduction is vague; it requires clearer articulation of specific research questions or hypotheses. The objectives should be explicitly stated.
- **Methodology and Analysis:** The manuscript lacks a detailed methodology. If it is a review, a description of the literature search strategy, inclusion criteria, and analysis approach must be added.

## REVIEWER'S REPORT

- **Results and Discussion:** There are no empirical results; the discussion is general and lacks depth. Incorporation of recent data, case studies, or examples would strengthen the arguments.
- **Conclusion and Implications:** The conclusion is not explicitly stated. A clear summary of main points, practical implications, and future directions is necessary.
- **Ethical Clearance:** Not applicable unless original research involving human or animal subjects is included. No information provided.
- **Language and Formatting:** The language requires careful editing for grammar and clarity. The current state impairs comprehension.
- **Tables, Figures, References:** No tables or figures are present; referencing style is inconsistent. Standardized formatting should be adopted.
