Detailed Reviewer's Report

- Although the case is rare, the authors should better emphasize its **novelty** by comparing with previously reported similar cases.
- The discussion needs more **critical analysis and comparison with existing literature**.
- The radiographic findings (page 3) should be explained in greater detail for better clinical understanding.
- Ethical approval (if applicable)
- Several grammatical and typographical errors are present throughout the manuscript.
- Some sentences are lengthy and need simplification.
- Formatting of headings and spacing should be standardized.
- Figure captions should be more descriptive and properly aligned with figures (pages 7–13).
- Reference formatting should strictly follow **IJAR guidelines**.
