Clarity				
Significance				

Reviewer's ID: JPR-198

Detailed Reviewer's Report

As my expertise lies in life sciences, I am not qualified to comment on the technical content, methodology, or scientific validity of the system architecture, algorithms, or implementation details. The following comments are restricted to language, grammar, and formatting issues.

1. The abstract text appears twice on the first page (once at the very beginning and again under the "Abstract:" heading). This should be corrected to avoid redundancy.
2. The section headings show inconsistent formatting. For example, "Introduction:-" uses a hyphen, while "Significance of the Study:-" and others follow a similar pattern. This should be standardized.
3. In the "Proposed System-" section, the subheading "1) Functional Architecture and Data PipelineThe internal logic of Aurevix is as followed:" contains a formatting error where the text runs into the heading. This appears twice consecutively.
4. The "Identified Limitations" section is repeated twice in full on page 12. This appears to be a copy-paste error and should be removed.
