Detailed Reviewer's Report

The manuscript addresses a relevant occupational health topic and presents clear, well-structured findings. However, several language and presentation issues require minor revision before acceptance. There are instances of inconsistent formatting, including missing spaces after section headings (e.g., "Materials and Methods:-"), incomplete sentences, and mixed use of French and English terminology (e.g., "Tableau" instead of "Table" in Tables 8 and 9). Some tables contain formatting errors and incomplete data presentation, and figure references lack proper labeling. Additionally, a few sentences are awkwardly constructed and would benefit from minor grammatical refinement for improved readability. The acknowledgements section appropriately mentions institutional support. Overall, the scientific content is sound and the methodology is clearly described. With careful proofreading to correct these minor language inconsistencies and formatting issues, the manuscript will be suitable for publication. A minor revision is recommended to address these points.
