Detailed Reviewer's Report

This manuscript presents a narrative review of vertical root fractures (VRF), covering etiology, diagnosis, and management. The topic is clinically relevant and important in endodontics.

Major Comments

1. The abstract is too descriptive and lacks structure (no background–methods–results–conclusion format typical for reviews). Convert into a structured abstract.
2. Clearly state whether this is a systematic or narrative review.
3. No clear aim/objective statement at the end.
4. Section is very brief and underdeveloped.
5. No numerical data, epidemiological statistics, or recent evidence.
6. Include tables/figures summarizing risk factors.
7. Include evidence-based comparison of CBCT vs radiographs.
8. No consistent referencing style (Vancouver/APA not followed).
9. Thorough English editing required
