Detailed Reviewer's Report

This manuscript is a short review about thyroid emergencies like thyroid storm and myxedema coma. The topic is important, but the paper is too basic and reads more like notes or a textbook summary rather than a proper research article. It needs major revision before it can be published.

Major Comments

1. Lack of Depth

- The content is very basic and descriptive.
- No new insights or updated information, even though it is called an "update."
- Does not discuss recent guidelines or research.

2. No Methodology

- There is no explanation of how the information was collected.
- It is not clear whether this is a systematic or narrative review.

3. Weak References

- References are few and somewhat outdated (page 5).
- Some sources are not strong scientific references.
- Citation style is inconsistent.

REVIEWER'S REPORT

4. Data Presentation

- Tables are helpful but too simple and not explained well.
- No diagrams or flowcharts for clinical management.

5. Writing Style

- Language is clear but too simple for a journal article.
- Feels like teaching notes rather than scientific writing.

Minor Comments

- No proper structured abstract.
- Formatting is inconsistent (mix of bullet points and paragraphs).
- Limited explanation of disease mechanisms.
- No mention of limitations or future research.

Suggestions for Improvement

- Expand into a proper review article with clear structure.
- Add recent guidelines and updated studies.
- Include clinical algorithms or flowcharts.
- Improve references using recent journal articles.
- Add some critical discussion, not just description.
- Improve writing to match academic standards.
