Detailed Reviewer's Report

Decision: Accept with Minor Revisions

1. Overview

The manuscript examines the impact of Artificial Intelligence (AI) and Virtual Reality (VR) on gender identity formation. It suggests that AI systems tend to perpetuate biased and binary categorizations, whereas VR provides opportunities for more flexible and diverse identity representation through avatars. The study also introduces a conceptual model that combines algorithmic decision-making with virtual embodiment.

2. Strengths

- Addresses a timely and innovative research topic
- Demonstrates a solid interdisciplinary perspective
- Presents a well-structured conceptual model
- Incorporates recent and relevant literature (2020–2025)

3. Limitations

- Lacks empirical or experimental evidence to support claims
- Does not clearly outline the research methodology
- Contains some redundancy and overly elaborate writing
- Offers limited insight into the technical aspects of AI and VR implementation

4. Recommendations

- Provide a detailed methodology, particularly the process of literature selection
- Add at least one empirical analysis or case-based example

REVIEWER'S REPORT

- Expand on the technical explanation of AI and VR systems
- Improve clarity by reducing repetition and making the writing more concise
