Detailed Reviewer's Report

Title

Clear and relevant. It reflects the study design, population, and setting well.

Abstract

Well structured (background, methods, results, conclusion).

Some grammatical errors and repetition. Sample size inconsistency is not clearly explained.

Introduction

Good background on VTE and malnutrition with relevant references.

Could be more focused; some sentences are long and repetitive. The gap in literature is mentioned but not very sharply defined.

Materials and Methods

Study design and PDSA cycle are clearly described.

Small sample size (15 pre, 25 post) is not justified

Random selection process not clearly explained

Some wording/grammar issues

Ethical approval not mentioned

REVIEWER'S REPORT

Results are clearly presented with good use of percentages and tables/figures.
Inconsistency in total sample size (40 patients mentioned but audit numbers unclear)

Figures are described but not fully interpreted in text

No statistical testing shown

Discussion

Good comparison with other studies and literature support.

Too lengthy in some parts

Some repetition of results

Limited critical analysis of why improvement was only 68% and not higher

Conclusion

Clear and consistent with study findings.

Could be more concise; minor repetition of results.

References

Relevant and mostly recent.
