### Reviewer's Comment for Publication.

This article presents a case report and literature review of lung cancer diagnosed during pregnancy/postpartum, a rare but clinically challenging condition. The manuscript discusses the diagnostic difficulties, treatment considerations, and maternal-fetal risks associated with lung cancer in pregnant women. The authors emphasize the importance of early recognition of persistent respiratory symptoms, appropriate imaging, multidisciplinary management, and smoking cessation as a preventive strategy.

### Strength:

1. Addresses a rare and clinically important condition.
2. Highlights challenges in diagnosis and treatment during pregnancy.
3. Emphasizes multidisciplinary management and maternal-fetal safety.
4. Includes relevant literature references.
5. Raises awareness among clinicians about atypical respiratory symptoms in pregnant women.
6. Strong public health message regarding smoking cessation.

### Weakness:

1. Single case report with limited generalizability.
2. Limited clinical details and follow-up information.
3. Discussion section is relatively brief.
4. Lacks detailed comparison with previously reported cases.
5. No clear description of treatment outcomes and prognosis.
6. Some grammatical and formatting issues are present.

### Overall assessment:

The manuscript discusses an uncommon but significant clinical scenario that requires careful balancing of maternal and fetal health. The topic is important and educational for clinicians involved in oncology,
