### Reviewer's Comment for Publication.

The manuscript addresses an important clinical topic and presents a well-designed comparative study with an adequate sample size and appropriate statistical analysis. The findings are relevant and supported by the presented data.

However, **minor revisions** are recommended before publication. The authors should improve the language and grammar in a few sections, ensure consistency in terminology and drug nomenclature throughout the manuscript, and update the discussion by highlighting the clinical implications and study limitations more clearly. Additionally, careful proofreading is suggested to correct minor formatting and typographical errors.

These revisions are minor in nature and do not affect the scientific quality of the study. **The manuscript is recommended for acceptance after minor revision.**
