Detailed Reviewer's Report

The study is well conducted. It addresses the topic and presents the study in an understandable discourse. The manuscript has good flow and clarity too with good explanation. The research objectives are clearly stated, and the study is grounded in an appropriate theoretical and conceptual framework.

RECOMMENDATIONS: *However there is absence of data to support the arguments. Lack of data, numbers, yearly progress, graph, chart etc. make such studies incomplete. The use of terms like: has grown, is increasing, rising, increased outflow, significantly increasing and comparatively better are such terms which sound vague and incomplete without any supportive data. The reports and literature mentioned in the literature review and methodology part also provide significant data which should be taken reference of. This aspect would enhance the quality of paper and enrich it. It would also link the content to the conclusion and help reach a better assessment.*
