Reviewer's Comment for Publication.

This manuscript evaluates the qualitative phytochemical constituents of the methanolic extract of Cordia myxa. The study is relevant to herbal medicine and provides preliminary information on the presence of important bioactive compounds. The methodology is simple and clearly described, and the results support the traditional medicinal use of the plant. However, the study is limited to qualitative analysis and requires additional validation through quantitative and biological studies.

Strength:

1. The study focuses on an important medicinal plant.
2. Standard phytochemical tests were used.
3. Methods are clearly explained.
4. Results are presented in a simple and clear way.
5. The study provides useful information for future research.

Weakness:

1. Only qualitative analysis was done; quantitative analysis was not performed.
2. No biological activity was carried out.
3. Advanced techniques like HPLC or GC-MS were not used.
4. Statistical analysis was not included.
5. Minor grammar and formatting corrections are needed.

Overall assessment:

The manuscript provides useful preliminary information on the phytochemical constituents of Cordia myxa. It is easy to understand and suitable for publication after minor revisions.

Recommendation: Manuscript accepted for publication after minor revision.
