Detailed Reviewer's Report

The topic holds essence and has a lot of importance. The manuscript has been drawn in a nice framework however there are certain parameters it lacks to follow for a direct publication and hence it requires revision.

Corrections required-

The content lacks human written essence of a manuscript. AI content used most probably. AI help as far as ethical is acceptable but contents should not be taken directly and pasted to frame a manuscript. Requires re-writing.

Focus on more clarity of the topic and content.

There are ample amount of research papers, articles and books available on this discourse which must be taken into account and manuscript should be focused on again as there is some link missing between the title, abstract, introduction and the content.

Topic could also be reframed to have a better clarity and understanding of the manuscript.
