Detailed Reviewer's Report

-
- Check all mathematical equations for typographical clarity in the final typeset version.
- Table 10 should be explained more clearly, particularly the meaning of negative critical weights and the practical interpretation of the threshold values.
- The references should be checked carefully for consistency in capitalization, journal names, DOI formatting, and bibliographic completeness. The reference list includes relevant sources on MCDA, road alignment, social impacts, and displacement.
- The manuscript should clearly identify whether the survey protocol received any institutional or ethical approval, if such approval was required.
