Detailed Reviewer's Report

1. In radiology, the terminology used to describe how a radiograph is taken relies on a strict correspondence between the patient's body position, the path of the X-ray beam, and the resulting image.
2. The shoulder girdle (or pectoral girdle) is the bony and muscular framework that connects your upper limbs to your central skeleton.
3. The correspondence of radiographic views (incidences) of the shoulder girdle between the French and Anglo-Saxon medical systems is based on aligning traditional French eponym-driven techniques with descriptive or geometry-driven English terminology. Because the scapula rests at a 30° to 45° angle relative to the frontal plane of the thorax, both systems rely on specific patient or X-ray tube rotation to achieve true perpendicular and orthogonal imaging.
4. Medical imaging is the use of technologies to view the interior of the human body for diagnosing, monitoring, or treating medical conditions.

REVIEWER'S REPORT

5. A literature review and national survey in medical imaging provide critical insights into clinical appropriateness, curriculum standards, and the rapid integration of artificial intelligence. Recent national surveys and systematic reviews highlight key trends across the United States healthcare and educational systems.
6. The relationship, structural differences, and effects (incidences) of the French system (often referred to as the Continental European or Civil Law model) versus the Anglo-Saxon system (the Anglo-American or Common Law model) represent a classic comparative study across law, accounting, and economics.
7. The correspondence between these two frameworks highlights two fundamentally opposing philosophies: one rooted in state-driven, codified uniformity, and the other in market-driven, flexible pragmatism.
8. Key words are good but can be included more words.
9. Result part is awesome with tables and pictures.
10. Summary points should be moved to down of discussion parts.
11. In summary parts can be made abstract.
12. References can be given in alphabetical order.
13. Informations with significant points are very impressive.
14. After a small changes good to publish in your journal.
