Detailed Reviewer's Report

- Gestational trophoblastic neoplasia (GTN) is a group of rare, malignant (cancerous) tumors that develop from trophoblast cells of the placenta inside the uterus, typically following a molar pregnancy, miscarriage, abortion, or normal delivery.**
- A complete hydatidiform mole is a noncancerous type of gestational trophoblastic disease where placental tissue grows abnormally without any embryonic or fetal development.**
- A uterine arteriovenous malformation (AVM) is a rare and potentially life-threatening condition where arteries and veins in or near the uterus connect abnormally without tiny blood vessels (capillaries) in between.**
- Uterine arteriovenous malformation (AVM) is a rare and potentially life-threatening condition defined by an abnormal, direct connection between the arteries and veins in the uterus without a normal intervening capillary network. This creates high-blood-flow shunting that makes the vessels fragile and prone to sudden, heavy, or recurrent vaginal bleeding.**

REVIEWER'S REPORT

5. Doppler ultrasonography is a safe, noninvasive imaging test that uses high-frequency sound waves to measure the speed and direction of blood flow inside your blood vessels.
6. Doppler ultrasonography is a noninvasive medical imaging test that uses high-frequency sound waves to measure the speed and direction of blood flow inside blood vessels. It works by bouncing sound waves off circulating red blood cells and analyzing the change in their frequency—a phenomenon known as the Doppler effect.
7. Methotrexate is a prescription medication classified as an antimetabolite and disease-modifying antirheumatic drug (DMARD) that slows cell growth and suppresses the immune system.
8. Methotrexate is a prescription medication classified as an antimetabolite and immunosuppressant that is used at low doses to treat autoimmune inflammatory diseases and at high doses to treat various types of cancer.
9. Conservative management (also called conservative care or non-surgical/nondialytic care) is a structured medical treatment plan that intentionally avoids invasive procedures like surgery or dialysis, focusing instead on symptom control, non-invasive therapies, and maximizing quality of life.
10. Key words are good to understand research topic.
11. Abstract part is impressive.
12. Result part pictures are good for results can be made graphs.
13. Summary points can also be included.
14. References can be made in alphabetical order.
15. After those changes good to publish in your journal.
