Detailed Reviewer's Report

- Define all abbreviations at first use, .
- • Table 1 currently provides general advantages rather than experimental results. Consider replacing or supplementing it with a table containing measured properties.
- Table 3 should clearly define the units of the mass ratios
- • • Reference formatting is inconsistent. Some references are incomplete and some titles appear translated while others are not. The reference list should be carefully checked according to the journal's prescribed style.
- • The conclusion should be revised so that each major conclusion is directly supported by an experimental result reported in the manuscript
