Reviewer's Comment for Publication.

The manuscript presents a timely and relevant framework integrating sustainable tourism, regional infrastructure planning, environmental resilience, construction safety, governance, and giga-project delivery in Saudi Arabia. The structured integrative review provides a useful synthesis across accessibility, energy and water security, ecological systems, safety, community value, and adaptive destination operations, and the proposed lifecycle framework has practical relevance. Minor revisions are recommended to improve the transparency and reproducibility of the literature-search and selection process, clarify the basis for selecting the 30 studies, strengthen the distinction between evidence-based findings and the proposed conceptual framework, improve the presentation and formatting of Table 1 and the framework figure, and provide clearer measurable criteria for the proposed decision gates and resilience indicators. Some grammatical and typographical issues should also be corrected through careful proofreading. Overall, the manuscript is well structured, significant, and suitable for publication after minor revision.
