Detailed Reviewer's Report

The study is fairly conducted. It addresses the topic and presents the study in an understandable discourse. The manuscript has good flow and clarity too with good explanation. The manuscript makes a meaningful contribution to the existing literature. The results are carefully discussed. The findings are presented clearly and are supported by the evidence and discussions provided.

Required Revision:

- References not in Alphabetical order
- Manuscript is in Chapter format and the brief of every heading and topics make it look like a 'chapterisation of a research proposal' not a research paper. Change of Format required
- Use credible and authentic sources. Using sources in references and especially for citations such as Britannica, Vajiram & Ravi IAS (they are coaching institute notes) other as such shows lack of research and authenticity.
- The reference list is rich but as for citations only 2-3 particular references have been used continuously.
