Detailed Reviewer's Report

1. A medical prescription (often abbreviated as R or Rx) is a legal document issued by a qualified healthcare professional that authorizes a pharmacist to dispense a specific medication or medical device to a patient.
2. Dermatology is the medical specialty focused on the diagnosis, treatment, and prevention of conditions affecting the skin, hair, nails, and mucous membranes.
3. A comparative cross-sectional study is an observational research design that collects data from two or more distinct groups at a single point in time to compare the prevalence of an outcome or exposure.
4. A comparative cross-sectional study is an observational research design that evaluates two or more independent population groups at a single point in time to measure and compare the prevalence of exposures and outcomes between them.
5. Dermatologists prescribe significantly larger amounts of topical corticosteroids (TCS)—averaging 34% to 54% more—than family physicians, while maintaining similar levels of prescription potency

REVIEWER'S REPORT

- 6. A Comparative Cross-Sectional Study of Dermatological Medical Prescriptions typically evaluates variances in drug choices, dosages, and therapeutic potencies across different healthcare providers or clinical contexts.**
- 7. Cross-sectional studies analyze a specific "snapshot" in time to capture broader systemic behaviors, such as antibiotic stewardship, provider compliance with guidelines, or differences between specialized and primary care. Key findings from recent, high-impact clinical data reveal distinct patterns.**
- 8. Morocco is currently undergoing a massive economic shift to transform the relationship between its public and private sectors. For the last twenty years, Morocco's high investment rate (around 30% of GDP) has been heavily driven by the state. The public sector funded world-class infrastructure projects like the Tanger Med Port, high-speed rail lines, and massive renewable energy plants. However, this public-heavy model has struggled to generate enough jobs, leaving a large informal market and high unemployment among youth and women.**
- 9. Medical dermatology is a specialized branch of medicine focused on diagnosing, treating, and managing diseases, chronic conditions, and systemic disorders affecting the skin, hair, nails, and mucous membranes. This field connects external physical symptoms on your body's largest organ to internal health, helping doctors uncover hidden medical issues.**
- 10. Key words are good.**
- 11. Research topic is medically valued one.**
- 12. Significant points with abstract are understandable.**
- 13. Result part is good can be included graphs for values.**
- 14. Summary points also be added.**
- 15. References should be with alphabetical order.**
- 16. After those changes good to publish in your journal.**
