Reviewer's Comment for Publication.

The manuscript addresses an important and contemporary topic by integrating zero-trust architecture, cloud-native security, AI-assisted detection, DevSecOps, and cyber resilience. The review is well organized and provides a useful integrated security framework for future digital economies. However, some minor revisions are required. The authors should improve grammatical consistency and sentence structure throughout the manuscript, ensure consistency in technical terminology and formatting, and carefully check the presentation and numbering of tables and figures. The methodology section should also provide slightly clearer details regarding the review and source-selection process. References and in-text citations should be checked for completeness and consistency. After these minor corrections, the manuscript can be considered for publication.
