Reviewer's Comment for Publication.

The manuscript presents a relevant and timely review of AI-driven smart contracts for compliance and governance in blockchain-based public-sector platforms. The paper provides a well-organized discussion of AI, blockchain, smart contracts, governance, security, privacy, and accountability, with a useful bounded-automation framework. Minor revisions are recommended to improve English grammar and sentence structure, correct formatting and spacing of headings and tables, standardize technical terminology, and ensure consistency in in-text citations and references. Some statements should also be clarified for better readability and academic presentation. After addressing these minor issues, the manuscript may be considered for publication.
