Reviewer's Comment for Publication.

The manuscript addresses a relevant and significant topic concerning energy efficiency, project finance, investment risk, and strategic decision-making in Saudi Arabia under Vision 2030. The review is well structured and provides a useful framework connecting technical efficiency with bankability, risk allocation, financing instruments, and system value. Minor revisions are recommended to improve grammar and sentence structure, correct formatting and spacing throughout the manuscript, improve the presentation of tables and figures, and ensure consistency in technical terminology and headings. The authors should also carefully check the references and in-text citations for uniform formatting and completeness. After these minor corrections, the manuscript may be considered for publication.
