Reviewer's Comment for Publication.

The manuscript addresses an important and timely topic by integrating claims analytics, automated case management, and digital health dashboards to support value-based healthcare in Saudi Arabia. The proposed closed-loop framework is well structured and offers practical insights into risk stratification, coordinated care, outcome measurement, and alignment with Vision 2030. The review demonstrates good relevance for healthcare researchers, policymakers, and practitioners. However, minor revisions are recommended to improve the reproducibility of the literature search and synthesis process, ensure consistency in terminology and table formatting, and correct minor grammatical and presentation issues. The authors should also clarify the implementation stages and ensure that the proposed performance indicators are clearly defined. Overall, the manuscript makes a useful contribution and is suitable for publication after minor revision.
