Reviewer's Comment for Publication.

The study examines headaches in people who use computers and mobile phones. It includes 101 participants and studies how headaches affect their quality of life.

Strength:

1. The study focuses on an important health problem.
2. It includes 101 participants.
3. It uses questionnaires to assess headache problems and quality of life.
4. It studies physical, mental, and social health.
5. The topic is useful for understanding the health effects of screen use.

Weakness:

1. The number of participants is small.
2. Participants were selected through an online survey, which may affect the results.
3. The type of headache was not confirmed by a proper clinical examination.
4. The study cannot prove that using computers and mobile phones causes headaches.
5. Some questionnaire answers were missing.
6. Details about screen time and body posture are not clearly explained.
7. There is an inconsistency in the age groups mentioned in the text and table.
8. The ethics approval details are incomplete.

Overall assessment:

The study discusses an important topic, but the methods and results need improvement. The authors should correct the errors and explain the findings more clearly.

Recommendation: Manuscript accepted for publication after minor revision.
