Reviewer's Comment for Publication.

The article discusses the psychological effects of adoption and kafala in Morocco. It explains the legal and social aspects of adoption and the emotional challenges faced by adopted children and their parents. Three clinical cases are presented to show how early childhood experiences, delayed disclosure of adoption, and parenting styles may affect children's behaviour and emotional development.

Strength:

1. The article discusses an important social and psychological topic.
2. It explains the Moroccan kafala system.
3. It includes three clinical cases from child psychiatry practice.
4. It discusses attachment, identity, and emotional problems in adopted children.
5. It highlights the importance of psychological support for children and adoptive parents.
6. The topic may help healthcare professionals understand the challenges faced by adoptive families.

Weakness:

1. The article does not clearly explain how the three clinical cases were selected.
2. The number of cases is very small, so the findings cannot be applied to all adopted children.
3. Some conclusions are based on the authors' opinions rather than strong clinical evidence.
4. The article does not provide enough details about the psychological assessment and treatment of the children.
5. The authors should explain the ethical approval and consent obtained for presenting the clinical cases.
6. The clinical cases contain sensitive personal information. The authors should clearly explain how patient confidentiality was protected.

REVIEWER'S REPORT

7. Some psychological problems are linked to adoption without enough evidence to prove a direct relationship.
8. The literature review needs more recent and relevant references.

Overall assessment:

The article discusses an important topic and provides useful examples. However, the authors need to improve the clinical details, references, ethical information, and language. The conclusions should also be based on the information presented in the cases.

Recommendation: Manuscript accepted for publication after minor revision.
