Reviewer's Comment for Publication.

The manuscript addresses an important topic by examining human–robot collaboration, AI-enabled safety management, and sustainable warehouse operations. The review provides a useful discussion of occupational hazards, ergonomic risks, AI safety controls, and implementation strategies for Saudi logistics facilities. However, the literature search and selection process should be clarified, and all references and DOI details should be verified for accuracy. The practical recommendations would also benefit from clearer links to Saudi-specific evidence. Minor revisions are recommended to improve methodological transparency and academic quality.
