Reviewer's Comment for Publication.
The article discusses abnormal vaginal discharge in women. It covers common symptoms, menstrual history, pregnancy and childbirth history, personal hygiene, and psychological effects.The topic is important for women's health. However, the main problem is that the authors state that the results are estimated or illustrative and have not been confirmed using actual patient data. Therefore, the results cannot be considered reliable research findings in their current form.

Strength:

1. The topic is important for women's health.
2. The article discusses common symptoms such as itching, burning, and foul smell.
3. It considers the effects on daily activities and mental well-being.
4. It includes information about menstrual history and personal hygiene.
5. The article has a clear structure.
6. The authors mention some limitations of the study.

Weakness:

1. The results are based on estimated data instead of confirmed patient records.
2. The authors have not clearly explained how the participants were selected.
3. The authors have not explained which women were included or excluded.
4. The cause of abnormal vaginal discharge has not been confirmed through laboratory tests.
5. The findings are not compared properly with previous studies.
6. Some spelling, spacing, and formatting errors should be corrected.

Overall assessment:
The article discusses an important topic related to women's health. It includes information about symptoms, personal hygiene, menstrual history, and psychological effects.However, the biggest problem
