Reviewer's Comment for Publication.

The manuscript addresses an important topic concerning procurement and supply chain optimization in Saudi oil and gas megaprojects. The paper is well-organized, clearly written, and presents a comprehensive conceptual framework integrating procurement planning, supplier qualification, logistics, inventory management, and digital monitoring. The proposed Procurement-to-Workface Readiness Framework is relevant and potentially valuable for industry practitioners. However, minor revisions are recommended to improve the manuscript. The methodology should provide more specific information regarding the literature search, source selection, and synthesis process. The authors should also eliminate repetitive paragraphs in the future research section, improve the presentation and numbering of tables and figures, and ensure consistency between in-text citations and references. Overall, the manuscript is relevant and suitable for publication after minor revision.
