Reviewer's Comment for Publication.
The article discusses the knowledge and opinions of Phase 2 MBBS students about computer-assisted learning (CAL) in pharmacology practical teaching. The topic is useful, and most students showed a positive response towards CAL. However, some important study details are missing.

Strength:

1. The research topic is relevant to medical education.
2. A good number of students participated (174).
3. A questionnaire was used to collect responses.
4. Both advantages and disadvantages of CAL are discussed.
5. The study highlights the importance of technology in teaching.

Weakness:

1. The study was conducted in only one medical college.
2. The questionnaire details and validation process are not clearly explained.
3. The study does not include statistical analysis.
4. The actual improvement in students' knowledge was not measured.
5. Some results and percentages are incorrect or inconsistent.
6. The literature review is not properly supported by references.

Overall assessment:
The article is relevant, but the methodology, results and presentation need significant improvement before publication.

Recommendation: Manuscript accepted for publication after minor revision.
