Reviewer's Comment for Publication.

The manuscript addresses a relevant clinical topic by examining the therapeutic evidence for Robinia Pseudacacia and individualized homoeopathic interventions in the management of GERD. The review provides a useful comparison of available clinical reports and appropriately highlights the absence of direct randomized comparative trials. The discussion of study limitations, risk of bias, outcome assessment, and evidence certainty is relevant. However, the systematic review methodology requires further strengthening, particularly regarding the literature search strategy, eligibility criteria, study selection process, and risk-of-bias assessment. Some methodological details and references also require clarification. Overall, the manuscript has academic relevance and may be considered for publication after minor revision.
