Reviewer's Comment for Publication.

The manuscript presents a relevant and comprehensive review of engineering management strategies for improving industrial competitiveness, operational resilience, and sustainable business performance in Australia. It integrates recent research from operations management, supply chain management, manufacturing, and sustainability, providing a useful understanding of how operational capabilities, strategic planning, digital technologies, managerial competencies, and organisational ambidexterity contribute to industrial performance. The discussion of Australian evidence and the proposed four-phase resilience cycle and ambidexterity portfolio add practical and conceptual value to the study. The research questions are clearly defined, and the review methodology, findings, and limitations are presented in a logical structure. Overall, the manuscript addresses an important topic and demonstrates good academic relevance and significance. Minor revisions concerning language consistency, technical terminology, presentation of tables and figures, and reference formatting would improve its overall readability and presentation.
